Elizabeth Kinsey

Power Up and Power Apps

Presented by: Mary Roth and Elizabeth Kinsey, Principal

Are you looking for a way to push information to your learners? Do you need a better way to gather learner feedback? Power up your processes with Power Apps! In this session, Mary and Elizabeth will introduce attendees to the Power Platform of Microsoft PowerApps. PowerApps is a low code tool that allows users with limited experience in coding to create a powerful app. They will show you apps they've created and walk you through: -What was the business need? -What was the prior solution? -How did they leverage Power Apps to improve the experience? This introduction to PowerApps will not provide attendees with the skillset of learning how to build PowerApps on their own, however, resources for getting started will be provided. Attendees will feel empowered that they too can master PowerApps as Mary and Elizabeth learned this platform entirely on their own using resources such as LinkedIn Learning, YouTube, TikTok and Microsoft Power Platform message boards. At the end of the session, attendees will have a better understanding of how PowerApps could be used as a creative solution to problems within their own teams, and will leave feeling inspired to harness the power of PowerApps for themselves.

Objectives

- After the session our learners will be familiar with the Power Platform PowerApps.
- After the session our learners will be able to consider ways to use PowerApps as a solution for modernizing common learning and development processes.
- After the session our learners will be able to consider the ways that PowerApps can be used for "just in time," support on the job.
- After the session our learners will be able to brainstorm the ways PowerApps could be used to improve their lines of business.
